Web Page Authoring Project
Quantum Electronics

Quantum Electronics is a small manufacturer of stereo equipment based in Melbourne. It provides its products to a series of dealers around the country who then sell the products to the public. Quantum Electronics tries to provide the highest quality stereo equipment to its dealers as soon as orders are received, and to deal with dealer queries promptly.

The business employs 3 people, the Owner/Manager who oversees operations and manufacturing of the products, an accountant who keeps a payroll of employees, orders components and writes out sales invoices, which he gives to a dispatch clerk who finds the required items in the warehouse.

Business has increased dramatically over the past two years and the company has had difficulty processing the orders that its receives through the post. Sometimes orders are 'lost' in advertising mail and not processed for weeks. The company believes that it needs to provide dealers with a more effective way of ordering products and communicating with the company. It believes that a web page may be one way of improving communication and allow orders to be sent on-line. It would need a page to describe the company, pages showing its product range and new releases, and a page to allow dealers to order items.

The data that needs to be included is provided below and on the following page. Your teacher may provide this document to you so that the text can be copied and pasted onto your web pages. You will need to create or find images for the site.

About Quantum Electronics

Established in 1985.
